Lecture 18 CH101 A1 (MWF 9 am)

Wednesday, October 19, 2016

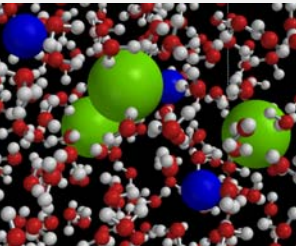

- Complete: Dissolving ionic solids
- Solubility rules ([memorize solubility guidelines fig 6.28 p 181](#))
Used in [Lab 4, Qualitative Analysis](#)
- Precipitation reactions
- Concentrations after precipitation

Next lecture: Ionization of molecular solutes; self-ionization of water; acid-base reactions: Competition for H⁺; balancing oxidation-reduction equations; complexation as Lewis acid-base reaction

Estimating molarity

The concentration of water is 55.5 mol/L.
 Get molarity from relative numbers of ions and water molecules.

Soluble ionic compounds, p181 (memorize!)

SOLUBLE COMPOUNDS	
Almost all salts of Na^+ , K^+ , NH_4^+	
Salts of nitrate, NO_3^- chlorate, ClO_3^- perchlorate, ClO_4^- acetate, CH_3CO_2^-	
EXCEPTIONS	
Almost all salts of Cl^- , Br^- , I^-	Halides of Ag^+ , Hg_2^{2+} , Pb^{2+}
Compounds containing F^-	Fluorides of Mg^{2+} , Ca^{2+} , Sr^{2+} , Ba^{2+} , Pb^{2+}
Salts of sulfate, SO_4^{2-}	Sulfates of Ca^{2+} , Sr^{2+} , Ba^{2+} , Pb^{2+}

Insoluble ionic compounds, p 181 (memorize!)

INSOLUBLE COMPOUNDS	EXCEPTIONS
Most salts of carbonate, CO_3^{2-} phosphate, PO_4^{3-} oxalate, $\text{C}_2\text{O}_4^{2-}$ chromate, CrO_4^{2-}	Salts of NH_4^+ and the alkali metal cations
Most metal sulfides, S^{2-}	
Most metal hydroxides and oxides	$\text{Ba}(\text{OH})_2$ is soluble

Precipitation reactions

NaCl and AgNO₃ are both soluble in water, but AgCl is not.

28

Lecture 18 CH101 A1 (MWF 9 am) Fall 2016

Copyright © 2016 Dan Dill dan@bu.edu

Precipitation reactions

If aqueous solutions of NaCl and AgNO₃ are mixed, the Ag⁺(aq) and Cl⁻(aq) ions can encounter one another.

Charles D. Winters

(b) Initially the Ag⁺ ions (silver colour) and Cl⁻ ions (green) are widely separated.

29

Precipitation reactions

When Ag⁺(aq) and Cl⁻(aq) ions do encounter one another, they will pair up as a lattice of AgCl(l)

Charles D. Winters

(c) Ag⁺ and Cl⁻ ions approach and form ion pairs.

30

Lecture 18 CH101 A1 (MWF 9 am) Fall 2016

Copyright © 2016 Dan Dill dan@bu.edu

Precipitation reactions

As more pairs form, they will **aggregate** so much that solid AgCl **settles out of the solution**, so that no AgCl(aq) remains in solution.

This process is called **precipitation**.

Charles D. Winters

(d) As more and more Ag⁺ and Cl⁻ ions come together, a precipitate of solid AgCl forms.

Charles D. Winters

(a)

[TP] When aqueous solutions of copper(II) chloride and sodium carbonate are combined, ...

- 25% 1. no precipitate will form
 25% 2. CuCO_3 will precipitate
 25% 3. NaCl will precipitate
 25% 4. both CuCO_3 and NaCl will precipitate

32

[Quiz] Some solid sodium carbonate and solid potassium nitrate are placed together into pure water. After thorough stirring and allowing things to settle, ...

- 25% 1. $\text{NaNO}_3(s)$ will have precipitated
 25% 2. $\text{K}_2\text{CO}_3(s)$ will have precipitated
 25% 3. Neither Na_2CO_3 and nor KNO_3 will dissolve, and so will have settled as solids to the bottom of the solution
 25% 4. Everything will dissolve, no precipitate will form, and so the solution will be clear

A comprehensive example

You are given 150 mL of a 0.20 M aqueous solution of **ammonium carbonate** and 150 mL of 0.40 M aqueous solution of **barium iodide**. These solutions are mixed and a precipitate forms.

Write the **net-ionic equation** for this process.

What are the **spectator ions** for this process?
