[Quiz] Ethanol,  $\text{CH}_3\text{CH}_2\text{OH}$ , has peaks at  $m/z = 25, 26, 27,$  and  $28,$  but dimethyl ether,  $\text{CH}_3\text{OCH}_3,$  does not. A reason for this could be that ...

- 20% 1. ethanol does not have O bonded to C  
 20% 2. dimethyl ether does not have O bonded to C  
 20% 3. dimethyl ether does not have C bonded to C but ethanol does  
 20% 4. dimethyl ether does not have H bonded to O  
 20% 5. dimethyl ether has C-O-C bonds but ethanol does not
