[TP] Sulfide ion,  $S^{2-}$ , is slightly larger than chloride ion,  $Cl^-$ , since they have the same number of electrons but sulfur has one less proton. See [https://en.wikipedia.org/wiki/Ionic\\_radius](https://en.wikipedia.org/wiki/Ionic_radius) Which has a larger lattice enthalpy?

33% 1.  $MgS > NaCl$   
 33% 2.  $NaCl > MgS$   
 33% 3. Too close to know without additional information.

## Lecture 12 CH102 A1 (MWF 9:05 am)

Friday, February 17, 2017

- Complete: Predicting relative values of  $\Delta_{latt}H$  and  $\Delta_{aq}H$
- Review: Colligative properties

Begin ch13: Equilibrium

- Reaction quotient,  $Q$ , spontaneity, and equilibrium

Next: Continue ch13: Reaction quotient,  $Q$ , spontaneity, and equilibrium. Predicting direction of change.  $Q$  depends on how a reaction is written; disturbing equilibrium (Le Chatelier)

## Lattice enthalpy, $\Delta_{\text{latt}}H$

**Key idea:** Electrical attraction (Coulomb's law) between oppositely charged ions in lattice

Energy  $\propto \frac{q_+ q_-}{\text{separation}}$

The **larger** charges the **greater** lattice enthalpy

MgS > NaCl

CaCO<sub>3</sub> > KNO<sub>3</sub>

 8

## Lattice enthalpy, $\Delta_{\text{latt}}H$

**Key idea:** Electrical attraction (Coulomb's law) between oppositely charged ions in lattice

Energy  $\propto \frac{q_+ q_-}{\text{separation}}$

The **smaller** ion size, the smaller the **separation** and so ...  
the **greater** lattice enthalpy

NaF > NaCl

LiCl > NaCl

## Enthalpy change of solution, $\Delta_{\text{sol}}H$

When  $\text{KF}(s)$  is dissolved in water in a beaker, the beaker **becomes warm**. What happens when  $\text{KCl}(s)$  is dissolved in water?

	Lattice	Aqutation	Solution
KF	+821	-837	-16 (warmer)
KCl

### Enthalpy change of solution, $\Delta_{\text{sol}}H$

When KF(s) is dissolved in water in a beaker, the beaker **becomes warm**. What happens when **KCl(s)** is dissolved in water?

	Lattice	Aquation	Solution
KF	+821	-837	-16 (warmer)
KCl	+703		

Why is the lattice enthalpy of KCl smaller?

BOSTON UNIVERSITY

### Colligative properties review

Non-volatile solute (negligible vapor pressure) ...

- lowers vapor pressure of solvent
- raises boiling point of solvent
- lowers freezing point of solvent

If solute cannot pass through a membrane ...

- the solvent will create an osmotic pressure

Details and practice in lab and in discussion

### Spontaneity of “reactants” → “products”

If products (right side) increase with time, we say ...  
the reaction is **spontaneous**.

If reactants (left side) increase with time, we say ...  
the reaction is **nonspontaneous**.

If the amount of reactants and products do not change with time, we say ...  
the reaction is **at equilibrium**.
