### Different amounts of “not enough” base

At 25 °C, the pH of a 1.0 L solution of  $c_a = c_b = 1.00$  M,  $K_a = 1 \times 10^{-5}$  is ...  
pH = 5.00

Add 100. mL of 0.100 M NaOH ...

$$\downarrow \text{HA}(aq) + \text{OH}^-(aq) \rightarrow \text{H}_2\text{O}(l) + \uparrow \text{A}^-(aq)$$

HA  $\rightarrow$  1.00 mol - 0.010 mol = 0.99 mol  
 $\text{A}^- \rightarrow$  1.00 mol + 0.010 mol = 1.01 mol

The pH of a 1.0 L solution of  $c_a = 0.99$  mol/1.10 L,  $c_b = 1.01$  mol/1.10 L is ...  
 $c_a/c_b = 1.00 \rightarrow 0.99/1.01$ , pH  $\rightarrow$  5.01 (tiny change!)

### Different amounts of “not enough” base

At 25 °C, the pH of a 1.0 L solution pure water,  $K_a = 1 \times 10^{-14}$  is ...  
pH = 7.00

Add 100. mL of 0.100 M NaOH ...

$[\text{OH}^-] = 0.010$  mol/1.10 L = 0.0091  
 pOH = 2.04, pH = 11.96 (huge change!)
