

Lecture 1 CH131 Summer 1
Tuesday, May 21, 2019

Course overview

Begin Ch1: The atom in modern chemistry

- Periodic table: Master key to chemistry
- Isotopes → atomic weight

Next lecture: Chemist's dozen: The mole. Ch 2: Chemical formulas, equations, and reaction yields

Course overview

Dan Dill, dan@bu.edu
<http://quantum.bu.edu/courses/ch131-summer-1-2019>
[../schedule.html](http://quantum.bu.edu/courses/ch131-summer-1-2019)

- **Lectures and discussions** will be held in **PRB/150**
- **Holiday** (no class) Monday, May 27
- **Makeup lecture** Friday, May 31

 2

Course overview

Dan Dill, dan@bu.edu
<http://quantum.bu.edu/courses/ch131-summer-1-2019>
[../schedule.html](http://quantum.bu.edu/courses/ch131-summer-1-2019)

- First **discussion** tomorrow: **9–9:50 pm**, PRB/150
- Six **discussion quizzes**: first one this Thursday, May 23
- **First lab** tomorrow, Wednesday, May 22, **1 pm**, SCI/268
- Two **lecture exams**: Monday, June 3 and June 17
- **Final exam**: Thursday, June 27

 3

We will cover chapters 1–3 and 9–17 of Oxtoby et al.
[../syllabus.html#lecture](http://quantum.bu.edu/courses/ch131-summer-1-2019)

Course grade

Your scores for each part of the course will always be available to you on Blackboard, at <https://go.gl/sbu7a> *learn.bu.edu*

Course grade is based on your overall course score

Contribution to overall course score	
Discussion quizzes	10%
Lecture quizzes	15%
Lecture exams	30%
Final exam	20%
Lab	25%

PERIODIC TABLE OF THE ELEMENTS

Handwritten notes on the periodic table:
 10 Ne, 20, 17, 9
 20 Ne, 21, 22, 23
 10 Ne, 10, 10

10

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Periodic table: Master key to chemistry

Handwritten notes:
 mass number A
 $35 = 17p + 18n$
 atomic # $Z = 17 = 17e^-$
 $17 = \text{atomic \#} = \text{\# of electrons} = \text{\# of protons}$
 electrons

74	10.5904	20.
	(17) Cl	
	Chlorine	Ar
	(35.453)	39
	25	

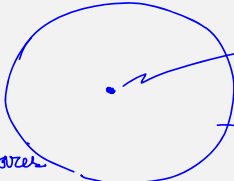

Diagram of an atom:
 nucleus of positive charge mass $10^{-14}m$
 $10^{-10}m$

11

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Handwritten notes:
 mass # $A = Z + N$
 atomic # $Z = 17$
 35
 17 protons
 17 units of negative charge, $17e^-$
 $35 - 17 = 18$ neutrons
 ≈ 17 protons
 35 nucleons
 $MPE \approx 2000$ times heavier than e^-

Mass spectrometer “weighs” atoms

Strip away an electron, accelerate **positive ions**, and then **deflect** them in a magnetic field.

Less deflection, heavier mass

Neon has three “**isotopes**”: ^{20}Ne , ^{21}Ne , and ^{22}Ne

Relative **peak heights** → **isotopic abundance**

$\frac{26}{4 \cdot 10}$
 change!

14

Average mass of CH131 students?

75 students weigh **100** lbs
 100 students weigh **150** lbs
 50 students weigh **200** lbs

Sketch the “mass spectrum” of the class, using just “counts” for the vertical axis

15

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

[TP] For our hypothetical class,
 75 students weigh **100** lbs,
 100 students weigh **150** lbs, and
 50 students weigh **200** lbs.

Based on your “mass spectrum” sketch, roughly (guesstimate), what will the average be?

1. Less than 100	0%
2. Between 100 and 150	100%
3. Between 150 and 200	0%
4. Greater than 200	0%

16

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Average mass of CH131 students?

75 students weigh 100 lbs
 100 students weigh 150 lbs
 50 students weigh 200 lbs

What is the expression for the fraction of students with mass 150 lbs, f_{150} ?

$$f_{150} = \frac{\# \text{ w/ mass } 150}{\text{total } \#} = \frac{100}{225} =$$

BOSTON UNIVERSITY 17

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Average mass of CH131 students?

75 students weigh 100 lbs
 100 students weigh 150 lbs
 50 students weigh 200 lbs

In terms of f_{100} , f_{150} , and f_{200} , write the expression that evaluates to the exact average.

2 $f_{100} + f_{150} + f_{200} = 1$
 7 $(f_{100} + f_{150} + f_{200})/3 = 1/3$
 8 $f_{100} \times 100 + f_{150} \times 150 + f_{200} \times 200$

BOSTON UNIVERSITY 18

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Average mass of CH131 students?

75 students weigh 100 lbs
 100 students weigh 150 lbs
 50 students weigh 200 lbs

total mass = $75 \times 100 \text{ lbs} + 100 \times 150 \text{ lbs} + 50 \times 200 \text{ lbs}$

average mass = $\frac{\text{total mass}}{(75 + 100 + 50)}$

= total mass / 225

= $(75/225) \times 100 \text{ lbs} + (100/225) \times 150 \text{ lbs} + (50/225) \times 200 \text{ lbs}$

= $f_{100} \times 100 \text{ lbs} + f_{150} \times 150 \text{ lbs} + f_{200} \times 200 \text{ lbs}$

BOSTON UNIVERSITY 19

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

[TP] For our hypothetical class, average weight of a CH131 student is 144 lbs. Which of the following statements is true for this class?

1. The weight of each student is 144 lbs	0%
2. No student weighs 144 lbs	100%
3. Neither of the statements is true.	0%

BOSTON UNIVERSITY 20

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Element identity and atomic number Z

$$\begin{matrix} A \\ K \\ 19 \end{matrix}$$

sodium	22.98976928
19	
K	
potassium	39.0983
37	

Number of protons = **atomic number** $Z = 19$
 Relative **atomic weight** = 39.0983
 Where does the number **39.0983** come from?

22

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Atoms of an element come in different "flavors"

Atoms with the same number of protons ...
 but with different numbers of neutrons ...
 are **chemically the same** ...
 but have **different masses**

We call such different flavors of atoms of an element **isotopes**

39.0983 u is the **average mass** of the different kinds of atoms (isotopes) of K that are in a sample of K.

sodium	22.98976928
19	
K	
potassium	39.0983
37	

23

Atomic mass unit u

$$\begin{matrix} (Z) \\ 6 \\ 6 \end{matrix}$$

$$\begin{matrix} 6e \\ 6p \\ 6n \end{matrix}$$

24

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Atomic mass unit u

* 1 u **defined** to be exactly $(1/12)$ mass of 1 atom of ^{12}C

Exactly 12 g of ^{12}C contains $N_A = 6.02214 \times 10^{23}$ atoms

Therefore, the mass of one ^{12}C atom is ...

$12 \text{ g} / N_A = 1.99265 \times 10^{-23} \text{ g}$

And so, **1 u** = ...

$(1/12) \times 1.99265 \times 10^{-23} \text{ g} = 1.66054 \times 10^{-24} \text{ g}$

$$1 \text{ u} = \frac{\text{g}}{N_A}$$

$$= (Z \times 10^{-23} \text{ g}) / N_A$$

25

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Average mass of an atom of K

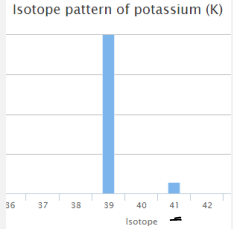

Two isotopes: K-39 and K-41
 K-39 peak at 38.9637 u, height 933
 K-41 peak at 40.9618 u, height 67

Write and then evaluate the expression whose value is the **average mass in u** of an atom of K.

$$f_{39} 38.9637 \text{ u} + f_{41} 40.9618 \text{ u} = 39.098 \text{ u}$$

$$f_{39} = \frac{933}{933+67} = 0.933 \quad f_{41} = \frac{67}{100}$$

$$f_{39} \times 38.9637 \text{ u} + f_{41} \times 40.9618 \text{ u}$$

$$0.933 \times 38.9637 \text{ u} + 0.067 \times 40.9618 \text{ u}$$

Isotope pattern of potassium (K)

BOSTON UNIVERSITY

26

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Average mass of an atom of K

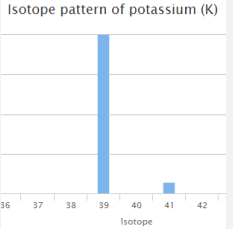

Two isotopes: K-39 and K-41
 K-39 peak at 38.9637 u, height 933
 K-41 peak at 40.9618 u, height 67

The average mass in **g** of an atom of K is

$$= 39.098 \text{ u}$$

$$= 39.098 \times (1/12) \times 12 \text{ g} \times (1/N_A)$$

$$= 39.098 \text{ g} / N_A$$

$$= 6.4923 \times 10^{-23} \text{ g}$$

Isotope pattern of potassium (K)

BOSTON UNIVERSITY

27

Average mass of any atom

The average mass of an atom of K is 39.098 g/ N_A
 The average mass of an atom of Br is 79.904 g/ N_A
 The average mass of an atom of H is 1.008 g/ N_A
 The **average mass of any atom in g/ N_A** is the number given on the periodic table.

BOSTON UNIVERSITY

28

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Molar mass of any element

Molar mass is the mass of N_A "average" atoms of an element.

The average mass of an atom of K is 39.098 g/ N_A
 The molar mass of K is $N_A \times (39.098 \text{ g}/N_A) = 39.098 \text{ g}$
 The molar mass of Br is 79.904 g
 The molar mass of H is 1.008 g
 The **molar mass of any element in g** is the number given on the periodic table.

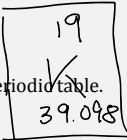

BOSTON UNIVERSITY

29

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

Atomic weight = magnitude of average mass

The atomic weight of K is 39.098 (no units!)
 The atomic weight of Br is 79.904
 The atomic weight of H is 1.008
 The atomic weight of an element is the number given on the periodic table.

BOSTON UNIVERSITY 30

Lecture 1 CH131 Summer 1 2019 Copyright © 2019 Dan Dill dan@bu.edu

[Quiz] The molar mass of Cl is 35.453 g. ³⁷Cl has a natural abundance of 24.24%. Which of the following statements is true?

1. The mass of one atom of naturally occurring Cl is 35.453 g divided by Avogadro's number. 0%
2. The mass of one atom of naturally occurring Cl cannot be 35.453 g divided by Avogadro's number. 93%
3. Neither of the statements is true. 7%

BOSTON UNIVERSITY 31

Terms to distinguish

Relative atomic mass, A_r : ratio of mass of an isotope relative to mass of 1/12 of one ¹²C atom
 A_r of ¹³C is 13.00335 (unitless)

Atomic mass unit, u: 1/12 mass of one ¹²C atom
 $1 \text{ u} = (1/12) \times (12 \text{ g}) / N_A = \text{g} / N_A = 1.66054 \times 10^{-24} \text{ g}$

Atomic weight: average of relative atomic masses of an element
 Atomic weight of C is 12.01 (unitless)

Molar mass, M : Mass in grams numerically equal to atomic weight; that is, the mass in grams of N_A "average atoms" of an element
 Molar mass of C is 12.01 g

BOSTON UNIVERSITY 32
